

IZONIL Rapid cohesion increasing, lime replacing plaster additive

Izonil Rapid (marketing authorisation number: 1481-CPD-0035) perfectly replaces slaked lime or calcium hydroxide.

Greatly improves the cohesion of plaster or mortar, an excellent replacement for lime (1 liter lime replacement = 300 kg of slaked lime)

Increases the adherence of mortar to bricks and the coherence of the whole wall.

Due to its pore-creating effect the quality and ventilation of the wall becomes better, the plaster is more durable, has an increased resistance to moisture, acids and salts.

By using IZONIL Rapid the preparation of the mortar becomes much cheaper.

Shrinking is minimised, the surface does not crack after drying

No undissolved lime leftovers can be detected in the material.

Significantly decreases handling, transportation and storage needs.

Decreased danger of frost.

Nature-friendly, non-toxic, does not harm hands, makes it easier to keep tools and building site clean

When preparing walls or plastering mortar: add 1,5 liters of Izonil Rapid to 200 liters of water, mix well and add to the mortar in small amounts as needed, while continuously mixing it either by hand or with a machine.

Recommended cement-sand ratio:

For plastering: 1:4

For walling: 1:5

IZONIL RAPID makes it a lot easier to prepare mortar

Shake IZONIL RAPID well before use!

It can be mixed with any antifreeze available on the market (in Central Europe).

Warranty: 2 years

Packaging: available in 1 and 5 liter containers
